EXPERIENCE

American River College TRIO SSS

April 2025 – Present

Student Ambassador

Sacramento, CA

- Provide technical support for students and staff across Windows and macOS environments, independently diagnosing and resolving software and hardware issues.
- Serve as the first point of contact for technical problems, reducing IT support ticket volume by resolving issues directly and efficiently.
- Maintain and analyze student engagement records using Microsoft Excel, producing organized reports to support program decision-making.
- Enhanced the TRIO Canvas platform using HTML and CSS to improve navigation, visual consistency, and overall user experience.
- Coordinated logistics for program events and workshops, managing system setup, participant registration, and technical troubleshooting.

PROJECTS

Data Structure Visualizer | C++, SFML

- Developing an interactive visualizer in C++ that renders step-by-step execution of sorting and searching algorithms in real time.
- Leveraged SFML for graphical rendering and user input handling, enabling control over animation speed and per-step algorithm inspection.
- Architected a modular class structure to cleanly separate rendering, logic, and data layer concerns, improving extensibility as new algorithms are added.

Tetris Clone | C++, SFML

- Built a fully playable Tetris clone in C++ with SFML, implementing core game mechanics including piece rotation, collision detection, line clearing, and progressive speed scaling.
- Added quality-of-life features such as a ghost piece preview and next-piece display, and refactored the codebase into a clean multi-class architecture (Engine, Piece, Board, Renderer).

Personal Portfolio Website | HTML, CSS, JavaScript

- Designed and developed a personal portfolio website to showcase projects, skills, and contact information without any frontend frameworks.
- Integrated the GitHub REST API to dynamically fetch and display repository data, keeping project listings up to date automatically.

EDUCATION

American River College

Aug. 2024 – Present

A.S. in Computer Science (Transfer to B.S. planned)

Sacramento, CA

- **Relevant Coursework:** Data Structures, Algorithms, Object-Oriented Programming (C++), Linear Algebra, Differential Equations, Physics (Calculus-Based)

SKILLS

Languages: C++, Python, JavaScript, HTML/CSS

Libraries & Frameworks: SFML

Tools & Technologies: Git, GitHub, Microsoft Excel
